Riverbend Apartments

4100 Millrace Pointe Drive, Dayton, OH 45415
Underwriting summary · model run Oct 20, 2026 · report generated Nov 9, 2026

Does not work at $9.15M (12.4%). Our bid: $8.60M ($90K a unit), 6% below — the most we can pay and still make 16%.

• The asking price is $9.15M ($95K a unit), a 5.72% cap rate on the seller's last 12 months of NOI.
• At that price we would earn 12.4% a year on our equity over a 5-year hold, against our 16% target.
• Our Year-1 NOI is $484K, 7% below the seller's $523K, because we underwrite what a new owner actually pays: property tax re-set on the purchase price (–$27K); replacement reserves of $250 a unit (–$24K); insurance at $1,100 a unit (the seller pays $956) (–$14K); bad debt at 2% of rent (–$13K); one-time takeover costs of $250 a unit (–$10K).
• Our bid of $8.60M is a 6.09% cap rate on the seller's T12 NOI. A broker will compare that cap rate to recent sales, so it is the number to defend in an offer.

How to make it work

If we could…	IRR at $9.15M	Change	Our bid becomes
Debt 0.5 pt cheaper (5.00% instead of 5.50%) Agency or assumable debt, a rate buy-down, or a better lender quote.	13.2%	+0.7 pts	$8.70M +$107K
Borrow 75% of the price instead of 70% The property yields more than the loan costs, so more debt raises the return.	13.2%	+0.8 pts	n/a
Run it $250/unit a year cheaper Payroll, contracts, utilities billed back, insurance re-bid: savings every year, also worth more at sale.	14.5%	+2.0 pts	$8.90M +$307K
$25/unit a month more other income Utility bill-back (RUBS), parking, storage, pet and admin fees, net of the 3% management fee.	14.8%	+2.3 pts	$8.95M +$355K
Sell at a 5.75% cap instead of 6.00% A quarter-point stronger market at sale. Not in our control - shown so it is not counted on.	14.2%	+1.7 pts	$8.86M +$262K
Cheaper debt, lower costs and more income, together	**17.4%**	**+4.9 pts**	**$9.37M**

Do all three of cheaper debt, lower costs and more income, and it reaches 17.4% at $9.15M — the deal can work at this price if those are real.
house estimate: each line re-runs the model's own cash flows (property tax re-set at each price, as the model does) with that one change. "Our bid" is the price that makes 16%. The sizes are examples to judge against this property, not promises.

Rent roll: Parsed 96 units; the report says 96.
T12: EGI - OpEx ties to the statement's NOI.

Values a person had to judge

Hold period (yrs, 1-8 — sets the sale year) (edited) · Exit cap rate % (edited)

Model checks that are not OK

OK (OVERRIDE)	Purchase price formula	Purchase price = T12 NOI / cap, or the manual override on Inputs.
HOUSE RULE	Debt quote	70% LTV, 6% interest-only (house rule).
ASSUMED	Capex scope	Interior cost per unit from the OM where it gives one; common/exterior is a template allowance.
WARN	Year 1 total opex within house cap	House ceiling from the 2026-08-10 benchmarks: total operating expenses no more than 50% of effective gross income in Year 1.

Assumptions still placeholders

Interior Renovation Cost / Unit — set from house defaults or a prior model, not from a quote or document.

Figures derived here (house estimates)

In-place cap rate (5.72%) · Gap to max price (–$553K) · Annual market-vs-in-place gap ($131,400) · Each expense line's share of EGI · Year-1 NOI change vs T12 (–$39,142)
